Descriptors-ARCHITECTURE, *BEHAVIORAL SCIENCES, *BIOLOGICAL SCIENCES, BUILDING MATERIALS, CITY PLANNING, COLOR PLANNING, DESIGN, DESIGN NEEDS, EDUCATIONAL FACILITIES, ENGINEERING, *ENVIRONMENTAL CRITERIA, *ENVIRONMENTAL INFLUENCES, HOUSING, HUMAN ENGINEERING, LIGHTING, PERCEPTION, PHYSICAL ENVIRONMENT, PHYSIOLOGY, PSYCHOLOGICAL STUDIES, SOCIOLOGY

A bibliography on sources related to the structuring of the physical environment has been developed based on professional and classroom experience. This initial selection of journals, books, and unpublished papers gives an overview of man and the environmental conditions which are part of his daily living pattern. Information leading to design principles and implications based on the physiological, psychological, and sociological needs of man, can be synthesized from the literature. Major areas of coverage include--(1) architecture, engineering, and design, (2) education, housing, and urban planning, and (3) anthropology, psychology, physiology, and sociology. An intensive periodical survey is given for form perception. The coverage also includes numerous subareas into general range of design theory and behavioral science. A selected sampling of environmental design student research reports is available from the center. (MM)

Bibliography of ENVIRONMENTAL DESIGN REFERENCES

CONTENTS

- A selected general listing of JOURNAL ARTICLES appropriate for environmental design considerations.
- A selected subject area listing of BOOKS appropriate for environmental design considerations.
- A selected listing of UNPUBLISHED PAPERS prepared by graduate students in the Environmental Design Center.

Prepared by ENVIRONMENTAL DESIGN CENTER, The University of Wisconsin, January, 1968

FOREWORD

The literature identified within this bibliography has been selected on the basis of support for potential users involved in the structuring of physical environments. This initial selection of journals, books, and unpublished papers gives an overview of man and the environmental conditions which are part of his daily living pattern. Information leading to design principles and implications based on the physiological, psychological, and sociological needs of man can be synthesized from the literature. Administrators, consultants, programmers, designers and others manipulating elements within the environment can become aware of the physical relationships which must be satisfied for humans to function in an optimum manner.

The bibliographic listings contained within this publication were identified and made available to the ERIC System by the Environmental Design Center at the University of Wisconsin. The publications have been identified through Environmental Design coursework over a two-year period prior to the establishment of the ERIC Clearinghouse on Educational Facilities. Expanding coverage with new publication citations will be published by the Clearinghouse on Educational Facilities as a periodic updating of the selected and general bibliographies. As an active participant in the Clearinghouse on Educational Facilities, the Environmental Design Center will continue to develop bibliographies and State-of-the-Art papers pertinent to subject areas dealing with educational facilities.

The Clearinghouse on Educational Facilities serves as an information service sponsored and financed by the U. S. Office of Education and operated by the University of Wisconsin's Environmental Design Center, Cooperative Educational Research and Services, and University Facilities Research Center, with technical support by the Library School and Department of Computer Sciences. This Clearinghouse specializes in the dissemination of information about building sites, buildings, and equipment used for educational purposes. Subject area coverage is directed toward the study of environmental influences in education as well as the efficiency and effectiveness of planning, financing, constructing, renovating, maintaining, operating, insuring, utilizing and evaluating educational facilities.
